LawnSmart[™]
ALL SEASON
 LAWN SEED

Yates[®] LawnSmart[™] is a range of premium, easy-to-grow lawn seed. Specially formulated to suit the Australian climate, this quality mix will ensure you can grow a lush, attractive lawn in both sunny and shaded areas.

Yates Quality Seed Guarantee
 If you have used this product as directed on the label and are not completely satisfied with the results obtained within 60 days from the date of purchase, simply write to us at the address noted on this pack explaining the problem. Proof of purchase will be required for a full refund. You must bear all expenses incurred in making a claim. The benefits of this warranty are in addition to the other rights and remedies under any applicable law. Our goods come with guarantees that cannot be excluded under Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Other products in the Yates range

Yates[®] LawnSmart[™] All Season Oversow Lawn Seed is a special blend of premium tall fescue, fast germinating ryegrass and other grasses, making it the perfect choice when establishing a drought tolerant lawn in cool climate areas. The turf-type Mustang II Tall Fescue develops a deep root system, which gives it superior drought tolerance when compared to many other cold-tolerant lawn grasses. The larger leaf blade size of this unique grass variety also makes it ideal to oversow shade-damaged areas of buffalo and kikuyu lawns.

4 easy steps to a successful new lawn

-  Prepare the soil by digging to a depth of 10-15cm, rake and level to produce a firm and even surface. If soil is dry apply Yates Waterwise Hose On Soil Wetter to improve water movement in your soil.
-  Leave area for approximately two weeks or until weeds begin to germinate. Light watering will be required to initiate weed germination. After weeds have germinated, spray the entire area with Yates Zero[®] Weedkiller spray. This ensures your lawn will not have to compete with weeds for nutrients while establishing, and promotes improved coverage.
-  Once the weeds have died off, lightly rake over the area to loosen the soil. First spread Yates Dynamic Lifter[®] Organic Lawn Food, then Yates LawnSmart[™] lawn seed. Scatter first half in a North-South direction and the remaining half in an East-West direction and rake into the surface, in one direction only to ensure a more even result.
-  Avoid ALL traffic (including dogs) on the area until the lawn is well established. **Important** – keep the newly sown lawn damp **at all times** by watering regularly with a fine mist spray. May require watering several times a day in hot or windy conditions. Lawn should be first mown when it reaches 10cm in height and then gradually reduce to a minimum of 5cm.

Autumn a good time to strengthen your lawn before winter	<ul style="list-style-type: none"> • Spread Yates Dynamic Lifter[®] Organic Lawn Food prior to sowing • Sow a new lawn, or patch an existing lawn with Yates LawnSmart[™] Lawn Seed • Feed your lawn and control weeds in established lawns with Yates Weed 'n' Feed[™] Granular
Winter a time to care and protect	<ul style="list-style-type: none"> • In late winter to early spring, prepare soil for a spring sowing • Control weeds in established lawns with Yates Bindii & Broadleaf Weed Killer late winter to summer
Spring time to feed and nurture your lawn	<ul style="list-style-type: none"> • Sow a new lawn, or patch an existing lawn • Feed an existing lawn with Yates Lawn Fertiliser
Summer time to enjoy your cool soft thick lawn	<ul style="list-style-type: none"> • In late summer to early autumn, prepare soil for an autumn sowing • Reduce water use by mowing slightly higher than normal and watering early in the morning • Control lawn beetles and lawn army worm with Yates Baythroid[®] Advanced For Lawns

BEST SOWING TIMES
 For best results sow in early autumn to allow development of a deep root system prior to first summer.
 While spring sowings are possible, more watering will be required throughout the first summer.
 For oversowing shade or cold-damaged buffalo or kikuyu, sow in autumn or early spring.
