LawnSmart™
COUCH
LAWN SEED

Yates LawnSmart™ Lawn Seed is specially designed to make it easier to establish new lawns or rejuvenate existing lawns with seed. We start with the highest quality lawn seed, blended to a specific formulation to deliver the best results. We then add an innovative new seed coating technology that contains essential plant nutrients and a proprietary germination booster that is proven to speed up germination and enhance seedling vigour.

Yates Quality Seed Guarantee

If you have used this product as directed on the label and are not completely satisfied with the results obtained within 60 days from the date of purchase, simply write to us at the address noted on this pack explaining the problem. Proof of purchase will be required for a full refund. You must bear all expenses incurred in making a claim. The benefits of this warranty are in addition to the other rights and remedies under any applicable law. Our goods come with guarantees that cannot be excluded under Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Yates® LawnSmart™ Couch Lawn Seed creates a tough, dense lawn that is well suited to surviving our harsh Australian summers. Ideal for sun-soaked yards in warm, tropical or dry climates, it creates an extremely drought tolerant, hardwearing lawn. Self-repairing, with a soft, fine leaf blade, this lawn is ideal for children, pets and high traffic areas.

Yates LawnSmart™ Couch Lawn Seed contains an ideal blend of hulled and unhulled seed to optimise germination and lawn establishment in a wider variety of conditions.

4 easy steps to a successful new lawn

1.
Prepare the soil by digging to a depth of 10-15cm, rake and level to produce a firm and even surface. If soil is dry apply Yates Waterwise Hose On Soil Wetter to improve water movement in your soil.

2.
Leave area for approximately two weeks or until weeds begin to germinate. Light watering will be required to initiate weed germination. After weeds have germinated, spray the entire area with Yates Zero® Weedkiller. This ensures your lawn will not have to compete with weeds for nutrients while establishing, and promotes improved coverage.

3.
Once the weeds have died off, lightly rake over the area to loosen the soil. First spread Yates Dynamic Lifter® Organic Lawn Food, then Yates LawnSmart™ lawn seed. Scatter first half in a North-South direction and the remaining half in an East-West direction and rake into the surface, in one direction only to ensure a more even result.

4.
Avoid ALL traffic (including dogs) on the area until the lawn is well established. **Important** – keep the newly sown lawn damp **at all times** by watering regularly with a fine mist spray. May require watering several times a day in hot or windy conditions. Lawn should be first mown when it reaches 6-8cm in height and then gradually reduce to a minimum of 3cm.

Autumn a good time to strengthen your lawn before winter	• Spread Yates Dynamic Lifter® Organic Lawn Food prior to sowing • Sow a new lawn, or patch an existing lawn with a suitable Yates LawnSmart™ Lawn Seed • Feed your lawn and control weeds in established lawns with Yates Weed 'n' Feed™ Hose-on
Winter a time to care and protect	• In late winter to early spring, prepare soil for a spring sowing • Control weeds in established lawns with Yates Bindii & Broadleaf Weed Killer late winter to summer
Spring time to feed and nurture your lawn	• Sow a new lawn, or patch an existing lawn • Feed an existing lawn with Yates Dynamic Lifter® Super Concentrated Lawn Food
Summer time to enjoy your cool soft thick lawn	• Reduce water use by mowing slightly higher than normal and watering early in the morning • Control lawn beetles and lawn army worm with Yates Baythroid® Advanced for Lawns

BEST SOWING TIMES

Tropical zone – year round sowing (Avoid mid winter)

Subtropical zone – sow early spring to early autumn

Temperate zone – sow late spring to mid summer

Cool temperate regions – not recommended. Instead use Yates LawnSmart™ All Season Lawn Seed

Germinates best when soil temperature exceeds 21°C and typically occurs between 5 and 21 days after sowing. The speed of germination and seedling development is fastest when couch is sown under ideal conditions.
